Technical review sheet

Custom filter elements

A working document for specification review and sample evaluation. Complete the applicable fields before requesting a quotation.

Project / reference	Company / contact	Date / drawing revision

01 / Specification inputs

Material & structure Material and fabricated construction	Requirement / value / unit
Dimensions & installation Drawing revision, critical dimensions, seams and reinforcement	Requirement / value / unit
Operating conditions Equipment function, process medium, operating and cleaning conditions, movement and mechanical loads.	Requirement / value / unit
Air permeability Record value, unit, test pressure difference, test area and method. Compare results only under matching conditions.	Requirement / value / unit
Performance & acceptance Test method, units, tolerances and sample-trial criteria. Keep air permeability and particle retention distinct.	Requirement / value / unit
Application evaluation Verify installation and seams against the approved drawing; agree application-specific filtration and durability checks.	Requirement / value / unit

> This blank review sheet is not a product data sheet, test report or certificate. Values and acceptance limits require confirmation for the selected product.

02 / Evaluation & approval

Verify installation and seams against the approved drawing; agree application-specific filtration and durability checks.

Trial result / agreed acceptance

Review notes

03 / Order documentation

01 / Process brief

Define the medium, equipment, operating conditions and filtration objective.

02 / Fit & trial

Check installation dimensions; compare performance under agreed trial conditions.

03 / Specification approval

Identify the drawing revision, sample reference, test method and acceptance limits.

04 / Order & repeatability

Agree order or lot identification, inspection records, packaging and revision control.
